HornetQ User Manual - JBoss
AMQP binding AMQP stands for Advance Message Queuing Protocol, and is one of the most popular protocols for message-queue systems. Although the protocol itself is software independent and allows for a great architectural flexibility, this transport binding has been designed to work with the RabbitMQ broker, in a way that closely resembles the MQTT binding (in the previous section).

API Walkthrough & Development intro - Fiware-iotagent-json
camel.component.amqp.reply-to-destination-selector-name. Sets the JMS Selector using the fixed name to be used so you can filter out your own replies from the others when using a shared queue (that is, if you are not using a temporary reply queue). String. camel.component.amqp.reply-to-max-concurrent-consumers

AMQP :: Apache Camel
The AMQP broker, either RabbitMQ or Qpid, sits between any two Cinder components and allows them to communicate in a loosely coupled fashion. More precisely, Cinder components (the compute fabric of OpenStack) use Remote Procedure Calls (RPC hereinafter) to communicate to one another; however such a paradigm is built atop the publish/subscribe paradigm so that the following benefits can be ...

OpenStack Docs: AMQP and Cinder
AMQP and JMS message producers and consumers can make use of point-to-point messaging queues, for example. ... The meaning of the specific settings are explained fully throughout the user manual, however here is a brief description with a link to the appropriate chapter if available.

Documentation - Apache Qpid™
This document provides an overview of the SystemLink software architecture, including the technologies and designs that enable capabilities such as remote systems management, networked data exchange, data storage, and web application hosting. For additional resources and product documentation, refer to the links below: To learn more about the features and functions of SystemLink, visit ni.com ...

SystemLink™ Architecture - NI
The extension leverages the Quarkus Qpid JMS extension. A ConnectionFactory bean is automatically created and wired into the AMQP component for you. The connection factory can be configured via the Quarkus Qpid JMS configuration options.

AMQP :: Apache Camel
HornetQ will then accept AMQP 1.0 clients on port 5672 which is the default AMQP port. There are 2 Stomp examples available see proton-j and proton-ruby which use the qpid Java and Ruby clients respectively. 48.3.1. AMQP and security.

Chapter 48. Interoperability - JBoss
AMQP Client Hangs after abrupt disconnect. I'm using Camel AMQP Component (which uses Qpid under the hood) to connect to Artemis. Both are running locally on my mac. My routes are...

ActiveMQ - User - AMQP Client Hangs after abrupt disconnect
RabbitMQ MQTT plugin targets MQTT 3.1 and supports a broad range of MQTT clients. It also makes it possible for MQTT clients to interoperate with AMQP 0-9-1, AMQP 1.0, and STOMP clients. The plugin builds on top of RabbitMQ exchanges and queues. Messages published to MQTT topics use a topic exchange (amq.topic by default) internally.

RabbitMQ MQTT Adapter | Pivotal RabbitMQ Docs
It also makes it possible for MQTT clients to interoperate with AMQP 0-9-1, AMQP 1.0, and STOMP clients. There is also support for multi-tenancy. The plugin builds on top of RabbitMQ core protocol's entities: exchanges and queues. Messages published to MQTT topics use a topic exchange (amq.topic by default) internally.

MQTT Plugin — RabbitMQ
11.1 Adding Users¶. The first step is add a Thread Group element. The Thread Group tells JMeter the number of users you want to simulate, how often the users should send requests, and how many requests they should send.

Apache JMeter - User's Manual: Building a JMS (Java ...
For Python, look instead to Qpid Proton for Python 3 and AMQP 1.0 support.. Issues. For more information about finding and reporting bugs, see Qpid issues.

Qpid Messaging API - Apache Qpid™
The config.amqp section of the config file contains all the information needed to connect to the AMQP Broker from the IoT Agent. The following

attributes are accepted: host: Host where the AMQP Broker is located. port: Port where the AMQP Broker is listening; username: username that identifies the IOTA against the AMQP broker (optional).

Installation - Fiware-iotagent-json
A lot of materials about Service Bus mention that it uses AMQP 1.0. However, examples I have found use libraries that hide away AMQP layer, so it is not obvious how would one use generic AMQP 1.0 client and do things that are listed in this Service Bus example Being able to use independent AMQP client instead of supplied higher level clients might be important in several scenarios.
