Global warming and climate change effects: information and ...

Global Warming. Throughout its long history, Earth has warmed and cooled time and again. Climate has changed when the planet received more or less sunlight due to subtle shifts in its orbit, as the atmosphere or surface changed, or when the Sun's energy varied.

Global Warming - NASA

Average global temperatures from 2010 to 2019 compared to a baseline average from 1951 to 1978. Source: NASA. The rising average temperature of Earth's climate system, called global warming, is driving changes in rainfall patterns, extreme weather, arrival of seasons, and more. Collectively, global warming and its effects are known as climate change. While there have been prehistoric periods ...

Global warming - Wikipedia

Global warming, the phenomenon of rising average air temperatures near Earth's surface over the past 100 to 200 years. Earth's climate has changed over various timescales since the dawn of geologic time, and the force of human activities since the Industrial Revolution has been woven into the fabric of climate change.
