Integrated Cryptographic Service Facility (ICSF) is the software on a z/OS system that serves as an interface with the hardware where keys can be stored. IBMJCECCARACFKS keystores handle certificates and keys managed in Resource Access Control Facility (RACF). The certificates are stored in RACF, but you can store keys in ICSF or RACF.

Using the z/OS hardware cryptography leveraging ICSF ... - IBM

ICSF is a software element of z/OS. hardware cryptographic features and the Security Server (RACF element) to provide secure, high-speed cryptographic services in the z/OS environment. ICSF provides the application programming interfaces by which applications request

Introduction to z/OS ICSF - IBM

If ICSF is started without any REMOTEDEVICE entries specified in the ICSF installation options data set or while running on a machine type other than an IBM zEnterprise EC12 or later machine, the Display ICSF,REMOTEdevice command fails, and ICSF issues message CSFM669I.

Display ICSF - IBM

When ICSF service is available on a system, ICSF will have a new operator command that will allow running requests to finish, pause incoming requests, prepare to restart with the service libraries, and then stop ICSF. Through system automation (preferred), ICSF will be restarted and the paused requests will be resumed without a visible interruption.
