Spacecraft flight dynamics is the application of mechanical dynamics to model how the external forces acting on a space vehicle or spacecraft determine its flight path. These forces are primarily of three types: propulsive force provided by the vehicle's engines; gravitational force exerted by the Earth and other celestial bodies; and aerodynamic lift and drag (when flying in the atmosphere of ...

Introduction. The revised edition of this practical, hands-on book discusses the range of launch vehicles in use today throughout the world, and includes the very latest details of some of the advanced propulsion systems currently being developed. The author covers the fundamentals of the subject, from the basic principles of rocket propulsion and vehicle dynamics through the theory and practice of liquid and solid propellant motors, to new and future developments.

An important point is the book is relatively short and about 30-40 pages are devoted to each subject (rocket history, thermal rocket theory, liquid rocket engines, solid motors, electric propulsion, nuclear propulsion, rocket dynamics, etc.) So don't expect much details. Also, this book contains basically no design information.

An electrically powered spacecraft propulsion system uses electrical, and possibly also magnetic fields, to change the velocity of a spacecraft. Most of these kinds of spacecraft propulsion systems work by electrically expelling propellant at high speed. Electric thrusters typically use much less propellant than chemical rockets because they have a higher exhaust speed than chemical rockets. Due to limited electric power the thrust is much weaker compared to chemical rockets, but electric propul

Display Status: This object is not on display at the National Air and Space Museum. It is either on loan or in storage. Collection Item Summary: This is an unflown Propulsion Dynamics model rocket motor from 1963. It is made of plastic and contains non-explosive propellant. A motor is used only once to power a model rocket. G. Harry Stine, a pioneer in the field of flying rocket models, donated this artifact to NASM in 1973.
