applied to real world problems (project), research work (how mathematics is used in a job), recreational mathematics approaches (logical games, jokes), etc.

### **SUBJECTIVE QUESTIONS AND ANSWERS FOR A MATHEMATICS ...**

This gives  $N = 2601$  (ignoring extraneous solutions) Case 2:  $\sqrt{(2k + 2m + 1 = 101 ; 2k - 2m + 1 = 101)}$  which gives  $m = 0$  or  $N = 101$ . This solution we ignore as it makes  $N(N - 101) = 0$  (a non positive square). Hence the only solution is  $N = 2601$  and there are no other values of  $N$  which makes  $N(N-101)$  a perfect square. 2.

I believe that the ability to perceive elegance is a subjective thing. The fact that a problem has more than one solution does not make mathematics subjective. But the fact that the two proofs can be compared to each other and arguments can be made over which is the better definitely does make mathematics subjective.

Subjective questions create an enormous amount of work for teachers. Teachers who ask subjective questions must care about whether you are gaining a deep understanding. They want to see evidence that you understand concepts behind the facts, so you must demonstrate in your answers that you can discuss the subject matter with a well-constructed argument.
