A Circular Economy is an alternative way countries manage their resources, where instead of using products in the traditional linear make, use, dispose method, resources are used for their maximum utility throughout its life cycle and regenerated in a cyclical pattern minimizing waste. They strive to create economic development through environmental and resource protection. The ideas of a circular economy were officially adopted by China in 2002, when the 16th National Congress of the Communist

The circular economy is the solution to tackling food wastage and the Chinese government has understood it. It is estimated that China generates 88.6 million tons of food waste each year, which is enough food to feed over 15% of the country's population. Furthermore, 35 million tons of food waste is lost in household and warehouse storage.
